Gruppo
Giuriato&Fortuna

Worldwide heavy-lift transport and logistics by sea, road, air

All inclusive service

Building
Industry
Heavy equipment
Global project
Boats

Whatever the route (by road, by sea, by air) a real problem free service begins before setting off on a journey: whether the distances are short or very long, Giuriato & Fortuna always knows that the secret for obtaining the complete client satisfaction is to take care of a project with regards to every single detail. An all inclusive professional service: the most important competitive advantage of a group where men and means, efficiency and know how are really above standard.

An exclusive qualification

Three operational offices in Italy: Verona, Fossano and Treviso. International partners, several lorries and semi-trailers, but most of all 40 years of wide-range experience in the field of moving, handling, freighting and shipping manufactured products of any weight and size all over the world.

Three highly specialized companies (Giuriato & Fortuna, Pavan, Di.Pref), locally and centrally coordinated.

An integrated approach we are proud of and which allowed our group to expand in different fields: building, industry, plant engineering,

boating industry, etc...

Every day we transport prefabs, machineries, vessels, tanks, laminar structures, with accuracy and punctuality

but the actual transportation (by road, by sea, by air) is only the tip of the iceberg: all preparations preceding the transportation (a precise planning of the shipment in respect to all its technical and bureaucratic aspects) and all subsequent activities (a careful mounting and an accurate installation) gives Giuriato&Fortuna their competitive edge.

Efficiency 24 hours a day

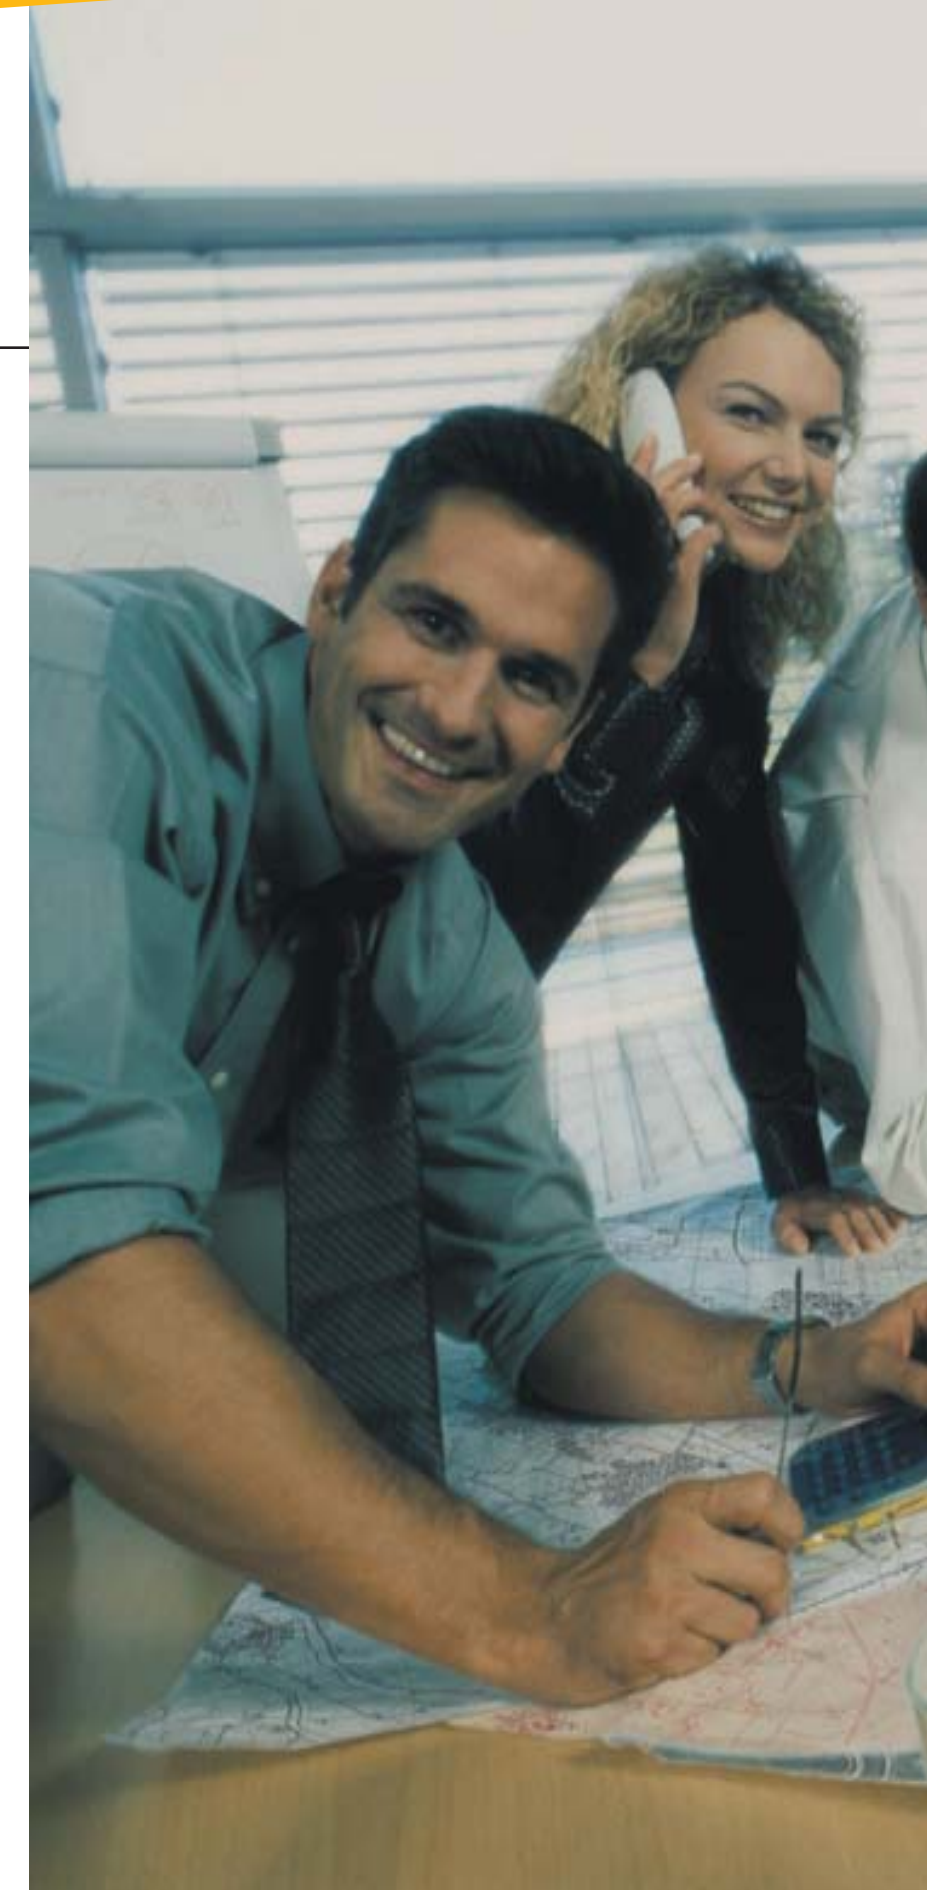

G&F is able to manage road transport in Europe (EU and Eastern Countries) and shipments by sea, by air and by rail for any destination.

Traffic operators are always at your disposal. Feasibility analysis of transports and related cost estimates are carried out within a very short time.

The vehicles used are low environmental impact vehicles equipped with state-of-the-art technologies concerning communication and safety.

The daily management of complicated problems makes routine transports easy along routes with physical obstacles (bridges, road configuration, electric cables, level crossings) and bureaucratic hindrances (escorts, authorizations, customs, tolls).

Giuriato & Fortuna is dedicated to the constant pursuit of the best quality: our certification according to the "TUV, ISO 9001, VISION 2000" standards attests to this objective.

Plant engineering

Far and wide professional competence

G&F has at its disposal an up-to-date fleet of vehicles, engineering and wide spectrum professional competence. The Group can claim the best references as far as transportation of industrial plants, machineries and tanks are concerned.

Boating industry

Sailing or motor boats, it makes no difference

Experience, dedicated means and staff, approved professional competence and the ability to integrate lifting and transport services make G&F the ideal partner for motor and/or sailing vessel transportation. From the shipyards to the private persons, the company is able to provide a punctual, customized and competitive service granting the highest reliability.

Industrial building

Professional competence can not be improvised

The prefab sector (concrete or iron), including mounting and installing services (we are able to plan and execute any kind of job order, up to the transfer of entire production plants) represents the company's core business, which has in time consolidated a high level position within this specific market sector.
